Notes:

1. GDP numbers are from Wikipedia table from "List of countries by GDP (PPP)" and "List of countries by GDP (nominal)". Data is from IMF for 2008.
2. Purchasing Power Parity (PPP) GDP accounts for the relative effective domestic purchasing power of the average producer or consumer within an economy. It is a better indicator for the propensity of businesses to purchase software in the local currency.
3. Nominal GDP converts the value of goods and services using a global currency exchange rates at a fixed rate in time.
4. Populations are from Wikipedia table from "List of countries by population." Most are from UN estimates and there is some variation in dates. USA is an estimate of 1 Jan 2009
